

# Phoenix Healthcare - Portsmouth

The PHOENIX Group is one of the top five pharmaceutical wholesalers in the world. It operates exclusively in Europe with its headquarters in Mannheim, Germany.

PHOENIX's wholesale activities cover most of the major European markets, and it commands a leading position in 'emerging countries'.

## The Brief

JET was approached by PHOENIX directly with a requirement to upgrade their existing heating system at their premises in Portsmouth. .

## The Solution

To provide additional heating and ventilation, JET installed a single, indirect gas fired AHU, incorporating DX cooling. The AHU, carefully sited to minimise noise due to the close proximity of housing, incorporated a temperature control monitoring system for MHRA compliance. The building was maintained at a maximum of 25°C and minimum of 18°C.

JET 'future -proofed' the new system so that when the existing heating system ceased to function, the JET system could adequately cope with additional demands.

## Technical Data

Data	Capacity
Length (m)	83
Width (m)	32
Average height (m)	6.5
Floor area (m <sup>2</sup> )	2655
Heater types	1 x Indirect Gas
